Healthy sleep

GOOD SLEEP AS THE BASIS OF PHYSICAL AND MENTAL HEALTH

A relaxing sleep is the foundation of positive life energy and the basis of physical health. For many of the more sensitive people, especially those suffering from allergies and asthma, the nights are not necessarily relaxed, as the bed is a haven for allergy-inducing organisms such as dust mites, fungi and mould. The majority of the microorganisms in our environment are not harmful to our health, but sensitive individuals experience their presence as unpleasant irritation of their skin and eyes, difficulties breathing and a general feeling of malaise. Odeja Medical collection is a collection of sleeping products that enable comprehensive protection of the bed and provide substantial improvement to the quality of sleep.

Allergy friendly

EXCELLENCE THAT WORKS AND LASTS

The selected materials as well as special processing and implementation ensure protection from dust mites and other microorganisms. Maintaining a high level of hygiene is very easy due to the products being washable and durable. A broad range of products enables to fully protect sleeping environment from allergy-inducing microorganisms. It is thus important for more sensitive individuals to use quilts, pillows, mattresses and bed linen in their sleeping environment:

- that have been made from materials that dust mites, fungi and mould dislike,
- that have been made so as to actively prevent the penetration of microorganisms and
- that are simple to maintain,
- thus maintaining a high level of hygiene in their sleeping environment.

ALLERGO PROTECTION COATING

In conventional bedding, allergens are omnipresent, particularly in bed. During sleep, we inhale positively charged allergens, triggering different symptoms. This results in disrupted sleep similar to a cold.

Allergo Protection special coating has a reliable and durable bacteriostatic effect against a large number of harmful bacteria, yeast and dust mites. Other benefits of Allergo Protection coating are:

- it ensures lasting hygienic freshness and comfort;
- it can be washed frequently;
- it prevents development of odors caused by microbes;
- it has excellent effectiveness against MRSA;
- it has excellent wash fastness;
- has excellent temperature stability;
- is also skin-friendly and dermatologically tested;
- is easily bio-degradable;

PLEASANTLY SOFT SENSI-CARE FILLING

- Sensi-Care fibres have been specifically designed to deactivate the micro-organisms (fungi) that the mite needs to pre-digest its food (skin cells). By disrupting the food chain, the mite population can be limited.
- Soft Sensi-Care fibers, can provide a comfortable and pleasant feeling on the skin. This is particularly important for individuals with sensitive skin or allergies.
- High-quality fibers and manufacturing processes can contribute to the durability of the products. This ensures that the material remains in good condition even after repeated washing and frequent use.

INNOVATIVE TECHNOLOGY EVOLON®

- The main element of these innovative covers is the **Evolon®** innovative fabric. The **exceptional structure of this fabric** ensures mechanical protection against dust mites.
- **The fabric has been processed without the use of chemicals.** Its light and soft texture makes it exceptionally pleasant to the touch. Due to its fine structure, Evolon is less likely to cause irritation to individuals with allergies, making it a suitable choice for sensitive skin.
- Due to its breathability and moisture permeability, **it dries fast, provides a feeling of freshness and does not cause sweating.** The fine microfibers in **Evolon®** contribute to its breathability, allowing air to flow through the fabric
- Medical Micro Protect special protections **are washable at a very high temperature**, thus maintaining the highest possible level of hygiene.

The goal of incorporating anti-allergic protection into medical fabrics is to create a safe and comfortable environment for both healthcare professionals and patients. This is especially critical in situations where individuals may already be dealing with compromised health conditions and need to avoid potential allergens that could exacerbate their medical issues.

- the mattress cover maintains a high level of hygiene, due to its washability up to 95°C;
- the mattress is set on by using elastics, which keep its position no matter how much the child tosses and turns at night.

MAINTENANCE OF ODEJA MEDICAL PRODUCTS

- Wash the bedding regularly according to the care instructions. Use hot water (at least 60°C) to effectively remove allergens.
- Ensure Odeja Medical products are thoroughly dried after washing to prevent the growth of mold and mildew.
- Allergen-Proof covers act as a barrier, preventing dust mites and other allergens from penetrating the pillow. Wash them regularly.
- When possible, expose pillows and quilts to sunlight. Sunlight has natural antibacterial properties and can help reduce allergens.
- Over time, pillows and quilts may lose their effectiveness in preventing allergens. Consider replacing them periodically, especially if they show signs of wear and tear.
- Regularly monitor the condition of your pillows, quilts, and mattress covers. Replace or clean them as needed.

ODEJA - QUILTED EXCELLENCE SINCE 1932

Odeja is a renowned manufacturer of products for furnishing homes and buildings. We develop and manufacture textile products like quilts, pillows, bed linens, upper mattresses, and other accessories. Odeja products create a high standard of living, as they are distinguished by certified materials and state-of-the-art innovative manufacturing.

We know how to fully adapt to your wishes regarding the choice of materials, product dimensions, and ordered quantities. When you choose Odeja as your supplier, you will gain a partner with a strong, dedicated development team and superior and flexible production.
